

Listing of Claims:

Claims 1-20 (cancelled)

21. (Original) A method of accelerating the clearance of a polyethylene glycol-containing compound in the blood circulation of a patient who was previously administered with said polyethylene glycol-containing compound, comprising the step of administering to said patient a pharmaceutical composition comprising an anti-polyethylene glycol antibody.

22. (Original) The method of claim 21, wherein said anti-polyethylene glycol antibody is administered to said patient less than 10 days after administering said polyethylene glycol-containing compound to said patient.

23. (Original) The method of claim 21, wherein said anti-polyethylene glycol antibody is administered to said patient less than 5 days after administering said polyethylene glycol-containing compound to said patient.

24. (Original) The method of claim 21, wherein said anti-polyethylene glycol antibody is administered to said patient from 24 hours to 5 days after administering said polyethylene glycol-containing compound to said patient.

25. (Original) The method of claim 21, wherein said polyethylene glycol-containing compound comprising β -glucuronidase.

26. (Original) The method of claim 21, wherein said anti-polyethylene glycol antibody is an anti-polyethylene glycol monoclonal antibody.

27. (Original) The method of claim 26, wherein said monoclonal antibody is an IgM.

28. (Original) The method of claim 21, wherein said anti-polyethylene glycol antibody is derivatized with galactose so as to be targeted by an asialoglycoprotein receptor on a hepatocyte and internalized by said hepatocyte.

29. (Original) A method of treating a patient suffering from a tumor, comprising the steps of:

a) administering a polyethylene glycol-containing conjugate comprising tumor targeting means and means for activating an anti-tumor prodrug to said patient;

b) administering an anti-polyethylene glycol antibody to said patient to accelerate the clearance of said polyethylene glycol-containing compound from the blood circulation of said patient after step a; and

c) administering said anti-tumor prodrug to said patient after step b.

30. (Original) The method of claim 29, wherein said anti-polyethylene glycol antibody is administered to said patient less than 10 days after administering said polyethylene glycol-containing conjugate to said patient.

31. (Original) The method of claim 29, wherein said anti-polyethylene glycol antibody is administered to said patient less than 5 days after administering said polyethylene glycol-containing conjugate to said patient.

32. (Original) The method of claim 29, wherein said anti-polyethylene glycol antibody is administered to said patient from 24 hours to 5 days after administering said polyethylene glycol-containing conjugate to said patient.

33. (Original) The method of claim 29, wherein said means for activating an anti-tumor drug is β -glucuronidase.

34. (Original) The method of claim 29, wherein said anti-polyethylene glycol antibody is an anti-polyethylene glycol monoclonal antibody.

35. (Original) The method of claim 34, wherein said monoclonal is a IgM.

36. (Original) The method of claim 29, wherein said anti-polyethylene glycol antibody is derivatized with galactose so as to be targeted by an asialoglycoprotein receptor on a hepatocyte and internalized by said hepatocyte.

37. (Original) The method of claim 29, wherein said anti-tumor prodrug is tetra n-butyl ammonium salt of a glucuronide derivative of p-hydroxyaniline mustard.

Claims 38-41 (cancelled)
